DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The claims have been amended as follows for a grammatical (i.e. spelling) error:

Claim 20, line 5, deleted "lamaellae" inserted --- lamellae --- therein.

Allowable Subject Matter

Claims 12 and 20 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention teach a method for separating chemical substances which utilizes a microfluid chamber having intake channels and a *plurality of parallel adjoining liquid lamellae* of two or more different phases having a thickness in the submillimeter range or smaller. The chamber has a first electrode pair arranged thereon such that an electric field is generated parallel to the phase boundaries of the lamellae and a second electrode pair arranged such that an electric field is generated perpendicular to the phase boundaries of the lamellae. The method introduces liquid lamellae into the intake channels while an electric field is applied by said first and second electrode pairs.

Art Unit: 1759

The prior art of record Dantsker et al. (US 2002/0153046) teach a microfluidic device that utilizes a sol-gel that can comprise two phases (section 0060) that can be arranged in parallel in a plurality of channels (see figure 2b, 45,46,47 and 3b, 76,62,60 or 5b, 112 - showing plurality of channels). Dantsker et al. does not specifically teach the application of an electric phase, nor does Dantsker et al. teach a plurality of parallel adjoining liquid lamellae.

The next prior art of record is Oakey et al. (US 2003/0159999 A1). Oakey et al. teach a microfluidic device comprising flow channels which contain a first fluid 152 and a second fluid 154 which can be two different phases (figure 6, section 0062-65, laminar two-phase flow may be used as an effective barrier against particle cross-transport). Oakey et al. also teach the application of an electric field perpendicular to the fluid flow to move a particle 156 from one stream to another stream. However, Oakey et al. does not disclose a *plurality* of adjoining lamellae of two different phases. Nor does Oakey et al. teach a second pair of electrodes to generate an electric field parallel to the phase boundaries of the streams.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
